Liminal Industries Launches DUEL-V: A New Breed of Ground System for the Modern Battlefield

United States – 14 OCT 2025 – Liminal Industries today announced the launch of DUEL-V, a next-generation Dynamic Unmanned Expendable Light Vehicle, made for the realities of modern ground warfare.

Born from the FPV drone ethos, DUEL-V brings the same agility, speed, and adaptability to the ground domain. Designed for low cost mass production and chaos class deployment, the system enables scalable, resilient ground operations where traditional vehicles cannot go.

DUEL-V features a dual-orientation architecture that maintains mobility and control when inverted, allowing operators to continue the mission after impact or rollover. This “flip-agnostic” design reduces failure points to maximize mission uptime.

“DUEL-V is built for rapid scale and radical performance” said Bradley Balzer, CEO/ Founder of Liminal Industries. “It’s the FPV drone of the ground. Fast, expendable, and built for the new age of distributed warfare.”

With DUEL-V, Liminal Industries introduces a new class of ground systems that prioritize speed, scale, and versatility over legacy complexity.

About Liminal Industries

Liminal Industries develops advanced ground systems inspired by the FPV ethos blending speed, autonomy, and flexibility to redefine unmanned warfare at scale.
